Foundry Soft

Cast Iron Microstructure analysis Software - Foundry Soft

Introduction of Foundry Soft

A software based on a touchscreen concept, Foundry Soft is the most comprehensive solution for cast iron industries. The software is used to estimate nodules, flake size and the class and number from 1 to 8 as per ASTM, JIS and ISO standards. Furthermore, the software includes various templates for reporting.

- Option to get analysis report based on ASTM 247-67 or ISO 945_1 standards.
- Nodules touching boundaries are excluded in analysis.
- Artefacts less than 10 microns are excluded in analysis.
- Nodules are separated from non-nodules on predefined spheroidicity.
- The nodules/flakes form (designated by roman numbers I to VI) and size (designated by Arabic numbers 1 to 8) are reported.

- The flake occurring in cast iron in the form I, are reported on the basis of type of distribution (designated by capital letters A to E) and on the basis of orientation.
- The percentage of pearlite is calculated by excluding the graphite area.
- The matrix of pearlite, ferrite, graphite and carbide are reported in etched sample.
- Report is generated with specific international standards chosen by the user.
- F% is reported in JIS method.
